

## What's new in Snow Leopard.

### **Redefined from installation to shutdown.**

In ways big and small, Mac OS X Snow Leopard makes your Mac faster, more reliable, and easier to use.

### **More power to your Mac.**

Snow Leopard continues our innovation by incorporating new technologies that offer immediate improvements while also smartly setting it up for the future.

### **Out-of-the-box support for Microsoft Exchange.**

With Snow Leopard, the Mac is the only computer with built-in support for the latest version of Microsoft Exchange Server.

### **It runs Windows, too.**

Have a Windows application you need to use once in a while? No

### **Automatic time zone setup.**

If you're traveling around the world, the last thing you want to worry about is whether your computer is set to the correct time zone. Snow Leopard takes care of that for you.

Using the Core Location technology, it locates known Wi-Fi hotspots to set the time zone automatically, so you'll always know the right time no matter where you are.

problem. Every new Mac lets you install Windows XP and Vista and run them at native speeds, using a built-in utility called Boot Camp.

### **Smaller footprint.**

Snow Leopard takes up less than half the disk space of the previous version, freeing about 7GB for you — enough for about 1,750 more songs or a few thousand more photos.
