

1. Copy the ShhMBP folder to /Applications/Utilities
2. With Lingon, create a new launchd configuration file with these settings:

-- "Where" is "Users Daemons."

-- "Name" is something like

com.yourusername.launchd.shhmbp

Replace "yourusername" with your OS X account name. (That's the name next to the house in your Finder sidebar, and it's case sensitive.)

-- "What" is /Applications/Utilities/ShhMBP/ShhMBP start

-- "When" is "Run it when it is loaded by the system (at startup or login)."

3. Save and authenticate. This places the file com.yourusername.launchd.shhmbp in /Library/LaunchDaemons, from where it will run the specified Terminal command with root privileges at startup or login.

4. Restart
