

Your Apple wireless device is reporting the following information. Select the item to see more details.

You can ignore a problem if you don't want it to make the Apple wireless device's status light blink amber.

Ignore	Problem	
<input type="checkbox"/>	Double NAT	

Double NAT

This Apple wireless device has a private IP address on its Ethernet WAN port. It is connected to device or network that is using Network Address Translation (NAT) to provide private IP addresses. You should change your Apple wireless device from using DHCP and NAT to bridge mode.
