I timed it to make a pdf/reduce size of this. It took :48 seconds.

Yeah, it's WAY more difficult when the ability to print PDFs is built in system-wide and included with your OS....

Tales From The Front Line -- Your Stories!

Wow.
 Today I was in one of my hardware design classes. I asked how to print PDFs in a certain way or something like that. Anyway, I mentioned that I was using OS X and a mac. 🍏

My teacher and one of my better friends sitting next to me went "ugh". A mac? Why a mac? After some random bickering, they said that they hated how macs always complicated things.

Complicated things!?! 😬

How did they arrive at that conclusion?

Macs, and OS X, for the most part, take the complexity **out** of everyday computing, not add more. Windows XP adds more.

Maybe it's because most things in OS X are so straightforward, they miss them.

Case in point. I installed the newest version of Adium (well, just downloaded it really) the other day. The install process consisted of this:

1) Drag this icon over to this icon. That's it! Really! (The first icon was the app, the second was a linked folder to my apps folder).

I've installed hundreds of windows apps over the years and **nothing** has even been so easy or quick.

So.. what stories do you guys have?
