Posted: 2010-04-18 01:45 BST Roadbloc, for one, you aren't making your own situation any better by calling us all fanboys...especially when xfire as an application only supports PC. At least that is what the req's say. Besides, Mac is only for people with a lot more money to spend on a lot less...in my opinion. Btw, I went to Best Buy to try out the iPad. In another of my opinions, it really is overhyped. Just another gizmo in my room that will lose its own worth because I will find out that it can only really look at the interwebs at high speeds...and nothing else at the same time. The lack of multi tasking on it is horrendous for me, even if I was a Mac "fanboy" as Roadbloc would like to call out on. As for this thread, I've got my answer, and no more opinions are needed. I really hadn't intended for this to be a fail thread because one person decided to say something about another. I just want OPINIONS, dear God in Heaven please. If an admin spots this post, please lock it.
